

How to install gas burners in John T. Unger firebowls

NOTE: Always consult a licensed plumber or proper manuals before attempting DIY gas fitting.

Step 1: Plan location of firebowl and gas shut-off valve. Valve should be within 5-10 feet of pit, ideally.

Step 2: Run 1/2" black pipe for gas underground to location of firebowl. Include shut-off valve at desired location.

Step 3: Place a right angle (90° bend) connector right below center of firebowl.

Step 4: Connect pipe to angle and run through drain hole in bottom of bowl.

Step 5: Thread burner onto pipe. Use pipe dope on all fits to insure no leaks.

Yay, you're all done! Fire it up!
